

# Plasma Pen ‘Spray’ Facial Treatment

## *Everything you need to know.*

*The innovative Plasma ‘Spray’ Facial treatment is a remarkable scientific facial where an arc of atmospheric plasma gas is lightly sprayed over the surface of the skin. This stimulates the fibroblasts on a deep cellular basis to produce new collagen, whilst resurfacing the top layer of the epidermis. The production of new collagen results in younger looking and smoother skin.*

*The Plasma ‘Spray’ Facial treatment is a wonderful way to treat clients of all ages and is suitable for all kinds of skin conditions and imperfections, including; skin rejuvenation, sebum reduction, pore reduction, reducing active acne, improving the appearance of rosacea and reducing skin pigmentation.*

### What is the Plasma ‘Spray’ Facial treatment process?

- 1 Numbing cream is applied at each step of the process
  - 2 Plasma Gas is administered via sweeping motions
  - 3 This hits the skin and creates superficial trauma, to tighten the skin and pores for overall skin rejuvenation
  - 4 Growth Factor Serum, Advanced Healing Lotion, or new Inno Products are applied to treat targeted skin concerns
  - 5 Further treatments can be administered every 6-weeks to treat areas of specific concern
- 

### What results should you expect from your Plasma ‘Spray’ facial treatment?

- ◇ Brighter, smoother and tighter skin
- ◇ Reduced skin oil levels
- ◇ More even skin tone
- ◇ Total freedom from spots
- ◇ Reduction in fine lines and wrinkles
- ◇ Brighter looking skin with a healthy ‘glow’

- 16-25** - Treat problematic skin, including acne, acne scarring and other skin imperfections

## How much recovery time should you expect?

### First 24 Hours

You may look swollen, feel hot and look like you have scratches on your skin

### First 7 Days

You will experience peeling of the older, top layers of skin

### First 7-10 Days

Wait a minimum of 7 to 10 days to see results

### Between 2-4 Weeks

You can expect to see the best results within weeks 2 to 4

- ◇ Recovery following a facelift takes on average 4 weeks.
- ◇ Following Microdermabrasion recovery time is approximately 10 days.
- ◇ Recovery after a chemical peel takes approximately 14 days.
- ◇ After Laser Skin Resurfacing recovery takes approximately 10 days.

# Plasma Pen ‘Spray’ Facial Treatment

*Everything you need to know.*

## How should you prepare for your Plasma ‘Spray’ Facial treatment?

Avoid UV exposure for 6-8 weeks before the treatment

Use a high SPF moisturiser daily for 4 weeks before the treatment

Take Vitamin C orally for 2 weeks before the treatment and during the healing process

## What to expect after your Plasma ‘Spray’ Facial treatment?

The skin will flake away and heal over the first 7-10 days

Avoid the sun for 6 weeks after treatment

For the first 12-hours, your face may feel slightly sunburnt

Apply SPF 50 daily once the skin has flaked away

Try not to pick at the flaking skin

## How long do Plasma ‘Spray’ Facial treatment results last?

- ◆ Results depend on each individual case, and what you want to achieve
- ◆ Results are ongoing following the treatment
- ◆ A course of 3-4 treatments is recommended 4-6 weeks apart
- ◆ Once the desired effect has been achieved results can last between 3 and 5 years

## What other Plasma 'Spray' treatments are available?

1

This treatment can be done to rejuvenate any part of the body by working as a skincare peel for faster and more effective results.

2

The Plasma 'Spray' treatment can help to reduce the appearance of stretch marks by encouraging new collagen to repair the damage whilst resurfacing the texture. Backs of hands and tops of feet respond beautifully to this treatment to remove sun damage and irregular skin texture.

3

We recommend the Plasma Electroporation Fractional Facial 7-days post-treatment to treat the renewed skin with active ingredients and growth factors post all Plasma 'Spray' treatments, face or body.
