

Plasma Pen Upper and Lower Eyelid Treatment

The innovative upper eyelid treatment by Plasma Pen is a revolutionary non-surgical skin tightening treatment that works to shrink and tighten loose skin; resulting in clearer, younger, smoother looking upper eyelid skin. Upper eyelid treatments utilise the power of science and chemistry to promote an arc of plasma gas that creates thermal induction and micro-trauma to the skin; causing the skin to shrink, lift and tighten for an overall youthful glow.

Drooping or hooded eyelids will be lifted for a more youthful appearance, eyesight will be less hindered and fine lines, crows feet or uneven skin texture will be smoothed. With a Plasma Pen Lower Eyelid Treatment, under-eye bags will become significantly tighter and less likely to fill with fluid to reduce puffiness. The treatment works to reduce and smooth crows feet, whilst the central face skin will also lift and brighten as a direct side effect of the Plasma Pen Lower Eyelid Treatment.

What is the Plasma Pen Upper and Lower Eyelid Treatment Process?

- 1 Your Plasma Pen technician will conduct a full, in-depth consultation to ensure you are suitable for the treatment and to discuss the desired outcome.
- 2 Your Plasma Pen technician will apply a numbing cream to the treatment areas.
- 3 After your Plasma Pen technician performs a light Plasma Spray to the skin surface, they will apply a secondary numbing product. This ensures that no pain is felt during the treatment.
- 4 Your Plasma Pen technician will use specific Plasma Pen techniques to tighten the skin with Plasma Gas, leaving tiny carbon crusts on the surface of the skin which seals the micro-trauma to prevent infection and allow the skin to heal.
- 5 Following treatment, your Plasma Pen technician will apply a soothing and healing balm to protect the skin.
- 6 Full aftercare advice will be provided to ensure optimal healing and optimal results.

What results can you expect from a Plasma Pen Eyelid Treatment?

- ◇ Tighter, brighter and smoother skin
- ◇ A more youthful appearance
- ◇ Lifted upper eye-lid & reduction in hooded eyelids
- ◇ Reduction in skin lines

Plasma Pen Upper and Lower Eyelid Treatment

Who is the Plasma Pen Upper Eyelid Treatment for?

25-35 Years Old

To assist in maintaining youthful skin by stimulating collagen growth to prevent the signs of ageing

35-45 Years Old

To remove the early onset of slackened skin by rejuvenating and stimulating new collagen growth

45-55 Years Old

To help prevent upper eyelid drooping, to turn back time and to reverse the signs of ageing

55-65 Years Old

To remove excess skin on the upper eyelid, and alleviate any onset of drooping

65-75 Years Old

To strengthen the skin of the upper eyelids, reducing hooding and stimulating new collagen growth

75+ Years Old

To improve the overall appearance of the skin through skin tightening. This treatment works to reduce hooded eyes and darkening around the eyes

Who is the Plasma Pen Lower Eyelid Treatment for?

25-35 Years Old

The lower eyelid treatment works to strengthen the skin, and prevent early-onset rhytids

45-55 Years Old

To turn back the hands of time! Reducing under-eye expression lines, lax skin and skin bagging

55-65 Years Old

To remove excess skin on the lower bleph area to prevent the skin from becoming loose, and filling with fluid and causing puffiness

65-75 Years Old

To continually strengthen the under-eye skin and to prevent sagging of the under-eye area

75+ Years Old

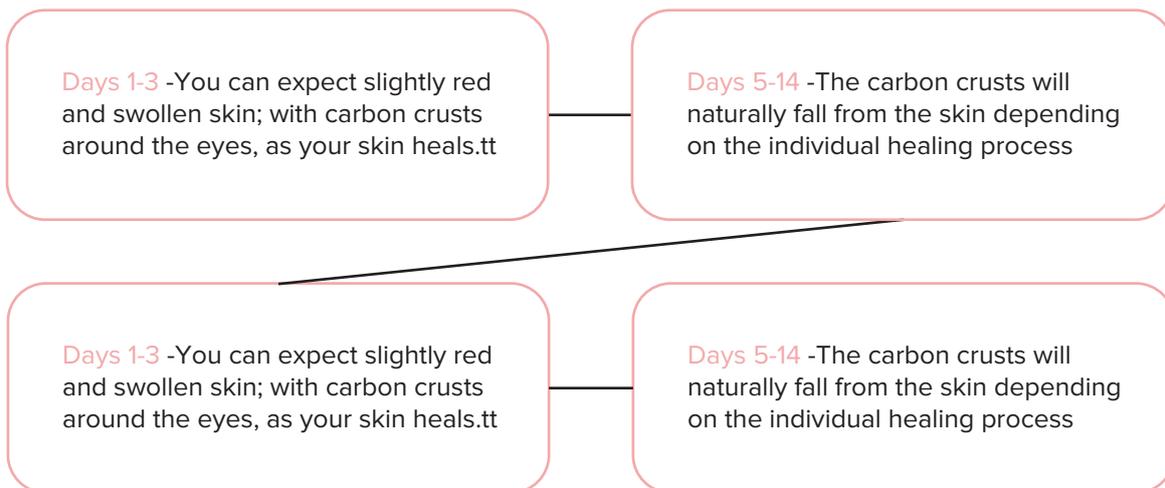

To improve the overall appearance of the skin, with skin tightening, reduction of under-eye bags and darkening around the eye

Plasma Pen Upper and Lower Eyelid Treatment

The downtime and recovery period for a Plasma Pen Eyelid Treatment is greatly reduced in comparison to invasive surgical treatments. Whilst surgery takes approximately 6 to 7 months to fully heal, and may leave you with scars; the Plasma Pen provides a soft-surgery like result, with faster recovery times.

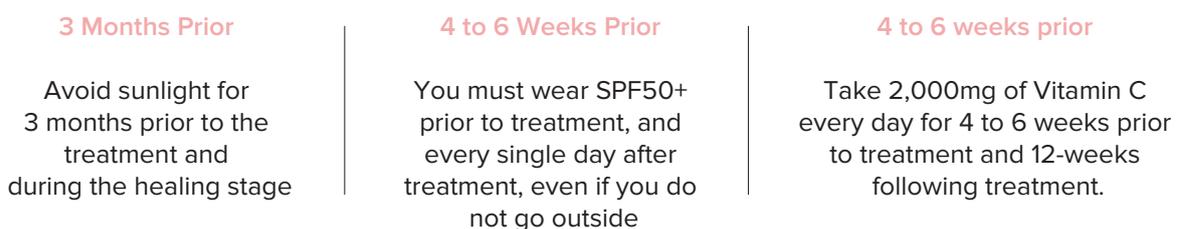

With a Plasma Pen, you can indulge in treatments more regularly to ensure optimum results. Whereas with surgery, you are limited to the number of procedures you can have performed in one area.

What recovery time should you expect following a Plasma Pen Eyelid Treatment?

How should you prepare for a Plasma Pen Upper and Lower Eyelid Treatment?

Prior to a Plasma Pen treatment, you should prepare your skin with good active skin-care products. You should continue this process right until the last carbon crust has fallen from your skin.

Plasma Pen Upper and Lower Eyelid Treatment

What other Plasma Pen treatments can you have on the eye area?

We recommend a range of other Plasma Pen treatments for the eye area, to work in conjunction with our Plasma Pen Upper and Lower Eyelid Treatments. These include:

1

Forehead Plasma Lift

Forehead Plasma Lift to reduce heavily hooded eyes and excess skin drooping for an overall improvement in skin appearance, reduction in fine lines and wrinkles and to reduce the signs of ageing.

2

Plasma Pen Dragon-Lift

Plasma Pen Dragon-Lift to draw the outer brow area up, which works to enhance a more curved and lifted brow that will work to reduce the outer hooding of the eyelid to improve the overall signs of ageing.
